Department of Computer Science and Engineering

- In this era of internet, e-commerce is growing by leaps and bounds keeping the growth of brick-and-mortar businesses in the dust.
- This paper outlines different aspects of developing an e commerce website and the optimum solution to the challenges involved in developing one.
- It consists of the planning process, determining the use case, domain modelling and pattern of the web application.
- The entire process is primarily divided into two parts: the front-end development and the back end development.

1. INTRODUCTION

2. LITERATURE REVIEW

3. PROPOSED METHODOLOGY

4. CONCLUSION AND FUTURE WORK

5. ACKNOWLEDGMENT

6. Greetings

- Electronic commerce or e-commerce refers to a wide range of online business activities for products and services.
- In our eyes we see it as a new dimension to the varied use of the internet and our purpose is to make it trendy in our country where its use is particularly very low.
- Because of the high context culture it is very important to develop trust among the people interested in a transaction.

- E-commerce in Bangladesh actually started in the year of 1999 based in USA with some non-resident Bangladeshis.
- Our motto is to develop an enriched ecommerce website in our country that should be largely accepted by the customers.

- Ullah, Syed Emdad, Tania Alauddin, and Hasan U. Zaman. "Developing an E-commerce website." 2016 International Conference on Microelectronics, Computing and Communications (MicroCom). IEEE, 2016.

- The entire development process has been subdivided into two: the front end development and the backend development.
- The front end comprises of the visually visible parts such as the home page, admin panel, contact page, shopping cart page.
- The back end contains the database and its interaction with the front-end.

PROPOSED METHODOLOGY

- The front end of our website was initially raw coded using JavaScript.
- This is a client side scripting language which is a dedicated language for web development.
- The code was mixed with the Hypertext Mark-up Language (HTML) to create a style sheet (CSS) language used for describing the look and formatting a document written in a mark-up language.
- We also introduced bootstrap program in our application which supports creation of animations.

PROPOSED METHODOLOGY

- The Database Management System (DBMS) provides support for the back end.
- The database management systems essentially software where we can create the database, add, drop, alter and update tables.
- In our application we have chosen the MySQL DBMS to hold the database.
- MySQL is a relational database management system.
- The main reason is MySQL development project has made its source code available under the terms of the General Public License (GNU) which is an open source web application.

CONCLUSION AND FUTURE WORK

- One can pick up the pace of his online business with the help of e-commerce application development and web development solutions.
- It is one of the cheapest means of doing business as it is e-commerce development that has made it possible to reduce cost of promotion of products and services.
- One can log on the internet even at midnight and can sell products at a single click of mouse.
- An interactive user friendly and focused website in the form of online shop can generate good business.
- So we are of the opinion that big companies should invest more on research and development for e-commerce.

ACKNOWLEDGMENT

I would like to thank my honourable **Khan Md. Hasib Sir** for his time, generosity and critical insights into this project.

Greetings
